

## First Steps of Southern and West Central Indiana Developmental Checklist

| At B      | irth                               | 4-6 mo |                                 | 10-12 r |                                  |
|-----------|------------------------------------|--------|---------------------------------|---------|----------------------------------|
|           | Diagnosed physical or mental       |        | Good head control in a variety  |         | Crawling                         |
|           | condition. The following are       |        | of positions                    |         | Pulling to stand                 |
|           | conditions that have a high        |        | Prop on elbows when on belly    |         | Walking holding onto furniture   |
|           | probability of resulting in        |        | Bears weight on legs            |         | Picking up small items using     |
|           | developmental delay:               |        | Beginning to roll well          |         | index finger & thumb & putting   |
|           | (1) Chromosomal abnormalities      |        | Using both hands equally well   |         | into mouth                       |
|           | or genetic disorder                |        | Reaches and grasps toys well,   |         | Eats stage 3 foods, crackers and |
|           | (2) Neurological disorder          |        | mouths hands & toys             |         | soft foods                       |
|           | (3) Congenital malformation        |        | Shakes rattles                  |         | Beginning to drink from sippy    |
|           | (4) Sensory impairment,            |        | Likes rocking, swinging, has    |         | cup                              |
|           | including vision and hearing       |        | regular sleeping patterns. Less |         | Points with index finger         |
|           | (5) Severe toxic exposure          |        | colic (cranky) at this time     |         | Beginning to place rings on      |
|           | (6) Severe infectious disease      |        | Visually watches toys as they   |         | stacker                          |
|           | (7) Atypical development           |        | move                            |         | Uncovers hidden toy              |
|           | disorder                           |        | Turns head to noise             |         | Places blocks into a container   |
|           | Biological risk factors that put a |        | Laughs aloud                    |         | Stops activity when told "no     |
| _         | child at risk of developmental     |        | Squeals                         |         | no"                              |
|           | delay if early intervention        |        | Can find a object that has been |         | Calls parent "ma ma" or "da da"  |
|           | services are not provided.         | _      | hidden                          |         | Jabbers expressively             |
|           | (1) Limited prenatal care          |        | Enjoys frolic and social play   |         | 1 word other than ma ma or       |
|           | (2) Maternal prenatal substance    | _      | Zingoyo irone ana social piay   | _       | da da                            |
|           | abuse                              | 7-9 mo | nths                            |         | Follow a simple command like     |
|           | (3) Severe prenatal                |        | On belly pushes up on arms      | _       | give me                          |
|           | complications                      |        | Begins sitting up by self       |         | Holds more than 2 objects in a   |
|           | (4) Severe perinatal               |        | Pushes self into crawling       | _       | hand                             |
|           | complications                      |        | Transfers toys from hand to     |         | Explores toys to see how they    |
|           | (5) Asphyxia                       | _      | hand                            | _       | work                             |
|           | (6) Very low birth weight          |        | Holding small items with        |         | Repeats performance laughed at   |
|           | (7) Small for gestational age      | _      | finger – thumb opposition       |         | Imitates new gestures            |
|           | (8) Severe postnatal               |        | Holds a toy in each hand        |         | Moves to rhythms                 |
|           | complications                      | _      | And bangs them together         |         | Simple play                      |
|           | complications                      |        | Turns head when name is         | _       | Tarabas pany                     |
| Rirth_3   | 3 months                           |        | called Shakes head "No –        | 13-15 r | nonths                           |
| Dii tii-, | Moving arms & legs easily          |        | No"                             |         | Walking                          |
|           | Holding head erect at 3 months     |        | Says "da-da" "ba-ba" and        |         | Crawls up steps                  |
|           | Hands open more and reaching       |        | "ma- ma"                        |         | Stacking 2 or 3 blocks           |
| _         | at 3 months                        |        | Eating stage 1 & 2 foods        |         | Scribbles with crayons           |
|           | Crying time decreases              |        | Vocalizes to mirror             |         | Looks at pictures and books      |
|           | Looking at human face and          |        | Imitates familiar gestures      |         | Points to get an object          |
| _         | environment by 3 months            |        | Plays with a toy for several    |         | Looks when asked "where's the    |
|           | Begins smiling                     | _      | minutes                         | _       | ball?"                           |
|           | Babbles or coos when talked to     |        | Stranger Anxiety                |         | Imitates simple sounds           |
|           | Mouths hands                       | _      | Z ,                             |         | Stronger anxiety                 |
|           | Molds body and cuddles             |        |                                 |         | Finger feeding soft table foods  |
|           | Draws attention in distress        |        |                                 | _       |                                  |
| _         | Diams auchinon in disticss         |        |                                 |         |                                  |

|     |      | Holding and drinking from  |                  | Has 50 words  | Separates easily  |
|-----|------|--|------------------|---|---|
|     |      | sippy cup  |                  | Spoon feeding with less mess  | Obeys simple rules  |
|     |      | Has 8 to 10 words  |                  | Pretend play with dolls   |   |
|     |      | Resists adult control  |                  | Initiates own play activities   |   |
|     |      | Plays ball   |                  | Shows a variety of emotions   |   |
|     |      |  |                  | Desires control of others   | This is a developmental checklist   |
| 16- |      | nonths   |                  | Comforts others in distress   | that will assist you in evaluating  |
|     |      | Walks upstairs   |                  | Identifies 6 body parts   | your child's development. When  |
|     |      | Runs   |                  | Sorts objects   | •   |
|     |      | Throws ball overhand   |                  | Remembers where objects   | using this chart, observe your  |
|     |      | Scribbles well with crayon   |                  | belong  | child over a period of time. There  |
|     |      | Stacks blocks 3 to 4 high  |                  |   | are several items listed for each   |
|     |      | Pretend play   | 25-28 1          | nonths  | age range. If your child is not   |
|     |      | Points to 5 named body parts   |                  | Imitates vertical, horizontal and   | accomplishing at least five items   |
|     |      | Clearly says 15 to 18 words  |                  | circular scribbles  | in his/her age range or has overall   |
|     |      | Begins to use a spoon very   |                  | Turns pages in a book one at a  |   |
|     |      | messy & will resort back to  |                  | time  | risks for delays, please contact our  |
|     |      | fingers  |                  | Imitates lining up blocks for a   | office for further information.   |
|     |      | Places only food in mouth  |                  | train   |   |
|     |      | Imitates adults- cleaning etc.   |                  | Has a vocabulary of 200 words   | A risk for delay could include  |
|     |      | Pick up toys   |                  | Putting 2 words together  | diagnosis such as syndromes,  |
|     |      | Temper tantrums are common   |                  | Understands size differences  | cerebral palsy, prematurity, Erb's  |
|     |      | Uses objects appropriately –   |                  | Understands 2 prepositions "on"   |   |
|     | _    | cup, spoon, brush  | _                | "in"  | palsy, low birth weight, failed   |
|     |      | Points to 5 to 7 pictures  |                  | Takes off clothes   | newborn hearing or vision   |
|     |      | Matches Objects  |                  | Identifies clothing for occasions   | screening, maternal alcohol or  |
|     |      | Knows circle and square  |                  | Frustration tantrums peak   | drug use during pregnancy, etc.   |
